

Getting started with your seclave

The complete manual can be downloaded at www.seclave.se

Terms and conditions

By using this product you agree to the terms of use. Check for updates of the terms of use and more information at seclave's website. Read the safety information before using seclave.

Buttons

The power button is on top of the seclave. The joystick is the larger button that can be found next to the display, on the front of the seclave.

Turn seclave on	press and hold power button and press joystick
Turn seclave off	move joystick up in main menu and hold for 1 second
Move marker in display right	move joystick to the right
Move marker in display left	move joystick to the left
Move marker to first menu choice	move joystick down
Go back	move joystick up
Select	press joystick

The seclave will automatically turn off when inactive for 30 seconds. When in a submenu it will turn off in 1 minute and when attached via USB port in 2.5 minutes.

Activate

To activate and customize your seclave you need a master password that consists of two words. Seclave automatically generates these as it is turned on for the first time. You need to enter these passwords every time you use the seclave, but these are the only passwords you ever need to remember!

Master password

1. Move and press the joystick until the counter reach zero, this creates entropy for your crypto keys.
2. The first word [1/2] of the master password is displayed.
3. Move the joystick to the right to display the second word [2/2]. **Make sure you remember these two words!**
4. Move the marker to the second word and once you have remembered the two words: press the joystick to continue.
5. Enter the master password by moving the joystick to the left and right, selecting a letter from the alphabet at the bottom of the display. A marked letter is chosen by pressing the joystick. Continue with the second password [2/2]. When the second password is entered you will be asked to enter them again. Once the words that make up the master password have been entered the seclave is activated and ready to use.

Start seclave

As you turn on the seclave and enter your master passwords the main menu will appear.

Input of data

Data can be imported into the seclave from a computer with the import program, read more in the complete manual at www.seclave.se. You can also enter information manually. Each data that you enter and want seclave to remember is named by a label. This is how you keep track of your passwords and other information. All information in the seclave is stored in alphabetical order based on the first letter of the label.

Create new entry

1. Enter New in main menu.
2. Choose a name for the label (a name of the information you want to save). Spell the label by moving the joystick  left and right and pressing on a letter.
3. When finished, move the joystick  down and press Done.
4. Choose a username, when finished move joystick  down and press Done.
5. Add extra information, or finish by moving the joystick  down and press Done.
6. Now you can enter a password by choice (Enter password), or let seclave generate one (Generate).

Done	finish entry and move on
Del	delete one character at a time
Words (only in label)	library of predefined words, optional text can also be added
Upper (not in label)	input of upper case letters
Lower (not in label)	input of lower case letters
Symb (not in label)	input of numbers and symbols

View passwords and other information

1. Press View in main menu.
2. Find label by moving the joystick  left and right and select one by pressing the joystick .
3. Choose if you want to see Password, Username, or Optional information by moving the joystick  right and left in the menu and choose by pressing the joystick .
4. Return to menu by moving the joystick  up.

Send passwords to a computer

You can send passwords and other information to a computer with the keyboard emulator. Read more about it in the extensive manual at the seclave webpage.
